⚠ Notes:

- ① Pad types: I = digital-input, O = digital-output, I/O = digital input/output (bidirectional), $A = Analog\ IO$
- Def default IO direction for digital IO
- Output Drive Unit is mA, only Digital IO has drive value;
- INT: interrupt support.
- The power configuration of all GPIOs should be matched with the actual power supply, Otherwise it may cause GPIO overvoltage damage, please refer to the Hardware Design Guide for details
